

Brand Framework

Getting Aligned

TECHADEMY HEXP | ALIGNMENT DOC · V1.0 · INTERNAL

1. Customer Segment

Let's look at customers as universities and break them into four broad buckets and these remain our customer segment definitions.

Big Guns — Overconfident

Large (20K+ students), high-reputation institutions with top-tier accreditation (NAAC A++). Confident they already outperform peers, resistant to change, and can have the pick of any vendor — they only engage when it's framed as protecting their elite status, not fixing a problem.

Examples: SRM Institute of Science and Technology, Lovely Professional University (LPU), Anna University

Challengers — Growth Mode

Younger institutions (~10 years or less) growing quickly in scale (~10% YoY) and stature (rising NIRF rank), often in close competition with a specific nearby rival. Time-pressured but willing to invest to get ahead fast, and open to new ideas.

Examples: Galgotias University, Amity University

Stable — Even Keel

Comfortable institutions with no strongly felt need for change, content with current placement levels and reputation. Resistant to new initiatives unless shown a concrete reason — the real risk here is complacency, not visible decline.

Struggling — Trouble Mode

Institutions facing declining admissions, poor placements, or accreditation issues, under real pressure to reverse the trend fast. High urgency for visible, fast-impact solutions rather than a long rollout.

2. Pain Point

For each customer segment, let's consider a few key pain points that our product is built to address.

Intensity of Pain Point	Big Guns	Challengers	Stable	Struggling
Tier 1	/ Manual timetable/faculty workload scheduling / Regulatory compliance tracking (UGC/AICTE/NAA C/NBA) / Faculty qualifications/research output tracking / Manual, error-prone exam scheduling/evaluation	Manual timetable/faculty workload scheduling / Seasonal admission bottlenecks / Curriculum design lag vs. industry needs / Difficulty measuring employability/outcomes / Weak/manual placement & alumni tracking / Poor visibility into drop-out/at-risk students	/ Legacy/clunky ERP systems	/ Navigating grants/funding body reporting / Alumni engagement as afterthought / Legacy/clunky ERP systems / Low digital literacy among staff / Budget constraints limiting tech adoption / Difficulty measuring employability/outcomes / Poor infrastructure limiting cloud adoption
Tier 2	/ Poor visibility into drop-out/at-risk students	/ Teachers spend too much time on bureaucratic stuff / Exam Monitoring beyond invigilation (online university)	/ Poor visibility into drop-out/at-risk students	/ Exam Monitoring beyond invigilation (online university)

Tier 3			/ Students are not employable / Exam Monitoring beyond invigilation (online university)	/ Teachers spend too much time on bureaucratic stuff
---------------	--	--	--	--

How to Approach:

Most universities have some form of ERP and most modules are common to all platforms. The difference is in the depth of the module.

Points to note:

High Pain points across all client types:

1. Fees Module: Most universities have a software that tracks fees payment. But the Controller of Examinations needs updated fees information at all times to determine whether or not a student should be allowed to take an examination. Across multiple factors - part payment, EMI payment, full payment, scholarships, grants, waived-off fees. Only HexP offers that module.
2. Placement Module: No other competitor has a built-in placement module. Most competitors offer it as an add-on module that has an additional cost. Most universities are able to place only about 40% of their graduates.

HexP is AI built into the university system, not bolted on.

3. Accepted Customer Belief (ACB)

Let's assume that the customer already believes these and we have to either work within these beliefs or challenge them.

- 1) NEP 2020 compliance requirement is going to get stricter.
- 2) Compliance is a huge burden - and it is impossible to automate it reliably.
- 3) Migration to a new technology takes a lot of time and effort.
- 4) Vendors overpromise - there's always some manual effort required. And too much reliance on software doesn't work.

4. Product Promise

5. Competitive Landscape

CamU

An integrated SIS + LMS platform for colleges and universities, built for multi-campus institutions to run academics and administration on one connected system.

Core offering: SaaS-based campus ERP

CollPoll (Digii)

An AI-powered campus automation and engagement platform going beyond traditional ERP/LMS — combining admin workflows with a social, mobile-first student experience.

Core offering: AI-powered SaaS platform

Samarth

A government-backed initiative by the Ministry of Education, built by University of Delhi, offering a free, cloud-based ERP suite adopted by 200+ universities and HEIs across India.

Core offering: Government-subsidized cloud ERP suite

Kramah

An AI-powered ERP, accreditation, examination, and learning management platform used by 85+ universities and 55+ colleges, known as the “Uber of Accreditation” for its NAAC/NBA/NIRF automation.

Core offering: AI-powered ERP + accreditation management platform

Creatrix Campus

An AI-native, cloud-based higher-ed ERP with 30+ modules spanning admissions to alumni, used in 18+ countries, with a strong focus on accreditation automation and outcome-based education.

Core offering: AI-native, modular higher-ed ERP

Entab (CampusCare)

A cloud-based School ERP and Student Information System trusted by 2,300+ schools across India, built specifically for Indian school workflows including NEP 2020 compliance, and used by large multi-campus networks like the Aditya Birla Group of Schools.

Core offering: Cloud-based school ERP + SIS, NEP-compliant

Fedena

An all-in-one school and college management software used by 40,000+ institutions across 180+ countries, with 50+ modules covering admissions, attendance, exams, and HR, plus a plugin marketplace for customization.

Core offering: All-in-one, affordable school/college ERP

vmedulife

A cloud-based ERP-LMS ecosystem (founded in Pune, 2014) integrating academics, administration, finance, and communication for schools, colleges, and universities of all sizes.

Core offering: Cloud-based ERP + LMS for institutions of all sizes

6. The Differentiator

A differentiator is a unique feature, value, or experience that sets a company apart from its competitors.

- HexP's compliance module automatically aligns with updates in regulatory requirements, and doesn't require constant manual intervention/efforts.
- AlphaRecrew leverages the gradebook module to provide detailed reports and analysis to the placement cell to bridge the gap between students and companies, thus streamlining the placement process.
- HexP's fees management module is robust and provides timely updates to the COE and gives better clarity on student fees status, thus making the exam scheduling process more efficient.
- HexP's AI layer predicts and maps program and course outcomes, saving time and effort for faculty members.

7. Positioning Statement

The specific space a brand owns in a customer's mind, relative to alternatives.

Option 1) An end-to-end unified ERP covering everything from admissions to placements, with compliance at its core - helping universities stay accredited, audit-ready, and operationally sound, so they can focus on what matters most: delivering a better learning experience and stronger outcomes for their students.

Option 2) HexP's AI-powered platform manages the entire university lifecycle from admission to placement, while keeping compliance aligned to the latest regulatory requirements at every step. HexP is a growth accelerator invested in the outcome for your students and your institution.

Brand tone of voice & vibe:

Not overtly urban or edgy. The tone should feel immediately familiar to conventional ERP users - reassuring rather than disruptive while gradually nudging them toward newer upgrades, features, and technologies, rather than presenting change as a leap.

8. Messaging Pillars

The 3–4 core themes a brand consistently returns to across everything it says. (Sometimes used interchangeably with “Messaging House.”)

Messaging pillars are the handful of ideas that show up again and again — in a website, a pitch, a social post — so the brand sounds like one consistent voice everywhere.

- Compliance related
 - We are a compliance first ERP
- Full system not silos hacked together
 - We are not just an ERP but a full university OS

9. Elevator Pitch — Narratives

A short, memorable way of communicating who we are and what we do — bringing together the belief driving the work internally with the story we want customers and the world to hear.

- 30-second version :

Compliance Focus - NEP 2020 keeps changing — and every change means more paperwork, more compliance risk, more pressure on your admin team. HexP tracks every mandate update automatically and keeps your accreditation documents organised by board — so you're always audit-ready. We would love to walk you through the entire system at a time convenient for you.

Placement and Learning Outcome Focus - NEP 2020 mandates are pulling faculty away from teaching and into paperwork — outcome mapping, documentation, compliance. It's a time drain your institution can't afford. HexP automates the entire outcome mapping process so faculty get back to teaching. Your students meet their learning outcomes. And they get placed. We'd love to show you how in a demo — what would be a good time?

- 60-second version :

Version 1

"Running a university means managing hundreds of moving parts simultaneously - admissions, academics, compliance, placements. Most institutions are doing it across multiple disconnected systems. Nobody has the full picture and everyone is firefighting.

HexP brings your entire institution onto one platform — with an AI layer that gives you real-time visibility across every function, keeps you ahead of regulatory changes, and frees your faculty and staff to focus on students instead of paperwork.

One system. Complete visibility. From admission to placement. Give us time to show you exactly what that looks like for your university."

Version 2

Everyone wants to do an AI course today. But AI has the capacity to be more than just a course - it is an advanced system. Running a university is hard and often lonely work. Most people around you don't truly understand the goals you are aiming for.

HexP gives you an AI-powered platform that secures and strengthens your accreditation, gets your students seen by the right companies, and manages the entire academic journey from admission to placement — without the complexity of disconnected systems or multiple vendors.

We're not here to just make your processes efficient. We're here to help your institution grow faster - better rankings, stronger placements, more students who choose you.

Let us show you exactly what that looks like for your university."

10. Reason to Win

The concrete reason a customer chooses us over any alternative when it actually comes down to a decision — not a general strength, but the specific thing that tips the deal.

Shorter version

HexP gives every function in your university its time back — so the people you hired to build the institution can stop managing systems and start building it.

Longer version

Every person in your institution is spending time managing processes that should be managing themselves. HexP's AI layer automates the work that shouldn't need humans — compliance tracking, outcome mapping, placement matching, fees management — so your faculty teach, your placement cell places, your finance team plans, and your leadership grows the institution. Not one of these functions in isolation. All of them, connected, intelligent, running together.
